The PPM Mechanical Understanding test involves the basic principles of dynamics, which are presented in the form of mechanical devices or situations involving force. Performance on this test is unlikely to be affected by previous experience, and is therefore a reliable predictor of a subject's innate mechanical aptitude.

The test taker had a raw score of 9 of a possible 32 points, and answered 32 of 32 questions.

The table below shows the percentile ranking for this score compared to three different comparison groups.
